

## copyArticulations.ly

Repeating the same articulations a great number of time can be a bit time-consuming to enter.

The function `copyArticulations` here, automates the job by copying the articulations from a pattern into your music.

As the music is rarely always the same, a few extra functions can give you some flexibility.

The code of the image below is the following:

```
\copyArticulations
{ c( c) c-. c-. }          %% the pattern
{                          %% the music
  c16 d e f g a b c b8 a g f
  \notCA e1
  \nSkipArti #2
  r8 d16 e f g a b c8 g e g
  \notCA c,1
}
```

Here, `\notCA` allows you to keep the music untouched and `\nSkipArti #2` skips 2 notes (so 2 articulations) in the pattern.
